Structural Steel

1. Specificationsstructural work.

hould consider use of twist-off Legume bolts and load indicator ield structural connections.

ed metal building roof purlins will be adequately braced on the flange to resist all design loads. Purlin slide clips commonly used a seam systems will not be considered an effective brace for the ate purlin bracing such as threaded rods or sag angles must be ddition to the slide clips.

1. Consultant will specify inspection and testing requirements and will include procedures for evaluation of test data.

Contractor will be responsible for scheduling tests. Contractor will be required to notify the Owner s representative a minimum of 48 hours prior to the time testing is needed.

2. Test results will be specified to be sent directly to the contractor, architect, and the Owner's representative.

Miscellaneous Metals

- 1. At exterior guardrails and handrails that are not a significant part of a building s architecture, construction will consist of fully welded hot dipped galvanized steel pipe. Infill panels will consist of vertical balusters. Support posts will be set in sleeves oversized 1" and cast into the walk.
- 2. On MU projects:

Revised 02/03/2025 Page 1 of 2 **Division 05**

Division 05 - Metals

2025.02

Specifications will require a mock up panel for all welded railings, grilles, and 3. similar architectural metal elements.
